

Aveyroni Partners

From founder-led to institutionally investable

Expanded partner deck: examples, data-room structure, demand/supply clusters, investor/fundraiser map, and execution blueprint

30-minute partner decision deck

Includes spreadsheet data room

Decision requested: align on 3 parallel workstreams, partner roles, and 90-day execution cadence.

The whitespace: value creation before capital

Traditional bankers arrive when a company is ready. PE operating teams arrive after investment. Aveyroni works in the gap.

Problem founders have	What investors see
Good business, weak institution	Key-man risk, messy MIS, no clean diligence
Capital need, no warm access	Low competition, weak terms
Operational upside, no operators	Investor must price the risk

Aveyroni solution	Result
Specialist CXO bench	Improved KPIs and governance
Buyer-first capital map	Only qualified warm conversations
Readiness sprint + data room	Better valuation and faster close

The repeatable engine

Every vertical uses the same six-step logic: catalyst → thesis → demand → supply → partners → execution.

Important inversion: we do not begin by asking “who wants to sell?” We begin by asking “who wants to buy/fund, and what are they missing?”

Outcome: Aveyroni manufactures investable supply against known buyer or investor demand.

Examples added

Powered land, hospitals, investor buy-box analytics, multifamily real estate, medtech, TPAs and startup readiness.

Example 1 — Powered land for data centers

Catalyst-driven origination: power becomes the scarce asset, not just land.

Layer	Aveyroni view
Catalyst	AI/data-center capex + grid constraints + permitting delays
Thesis	Pre-vetted powered land near substations can be converted into a financeable DC input
Buyer demand	DC operators, hyperscaler partners, infra funds, renewable IPPs
Seller/supply	Industrial landowners, distressed factories, logistics parks, DISCOM-adjacent parcels
Ecosystem	Title lawyer, surveyor, power consultant, environmental consultant, govt liaison
Execution	Power-node map → land title → grid feasibility → anchor buyer → SPV/JV/sale

Why this is Aveyroni-fit

Founder/seller bottleneck
Landowners rarely know DC buyer criteria or power diligence.

Investor bottleneck
Infra funds want sites but do not want raw, messy land diligence.

Aveyroni role
Create a vetted pipeline: title + power + permits + anchor-demand.

Economics
SPV carry, facilitation fee, advisory fee, or JV upside.

Example 2 — Unfunded hospitals made PE/strategic-ready

We help founder hospitals become investable before they enter a formal process.

Target archetype	Catalyst	What Aveyroni fixes	Likely buyer
50–300 bed founder hospital	Succession / capital / governance	MIS, EBITDA, ARPOB, occupancy, data room	Aster, Manipal, PE, GCC FO
Specialty hospital	Buyer roll-up demand	Doctor depth, SOPs, expansion story	Specialty platforms
Underutilized regional asset	Revenue/bed below potential	Operations, payor mix, doctor recruitment	Strategic operator
Partnership/family-owned asset	Partner liquidity/friction	SOTP, legal structure, sale consent	FO / hospital chain

Elite Mission-type lesson: do not only value beds. Build a bridge between current EBITDA, hospital real estate, education assets, equipment, and strategic operator upside.

Example 3 — Investor buy-box analytics

Encode buyer demand first, then score the supply universe against it.

Investor type	Buy-box fields to capture	Analytics output
Healthcare PE	EBITDA, beds, occupancy, specialty, city, governance	Target fit score + value gap
VC/growth	ARR, NRR, CAC payback, gross margin, burn, runway	Next-round readiness score
Family office	Control, property backing, downside protection, succession	Long-duration capital fit
Strategic buyer	Geography, asset category, clinical/product overlap, integration ease	Acquisition probability

Aveyroni builds the “near-fit” pipeline investors usually reject today but may fund/acquire after 6–18 months of targeted fixes.

Output: a living spreadsheet + CRM where every target has catalyst score, readiness score, buyer match, and next action.

Example 4 — Multifamily real estate

Same engine: identify buyer demand, then source asset supply and arrange debt/equity.

Layer	Multifamily equivalent
Catalyst	Refinancing stress, tired landlords, rates, capex fatigue
Demand clusters	RE PE, syndicators, 1031 buyers, family offices, debt funds
Supply clusters	Mom-and-pop owners, small portfolios, stale listings, broker whisper networks
Ecosystem partners	Property managers, appraisers, lenders, inspectors, attorneys
Execution	Owner list → underwriting → LOI → debt/equity stack → close

Aveyroni is not asset-class-specific. The same pipeline architecture works wherever demand exists but supply is messy and under-institutionalized.

Commercial logic: acquisition fee + debt/equity arrangement + carry / SPV upside where structured.

The spreadsheet is the operating system

The deck convinces partners. The workbook runs the business.

Sheet	Purpose
Dashboard	One-page control panel for vertical theses, workstreams and pipeline metrics
Use Case Matrix	Catalyst → thesis → buyer demand → supply → execution per vertical
Buyer Demand Clusters	Who has appetite and what signal proves it
Seller Supply Clusters	Where owners/assets/supplier inputs concentrate
Investor Fundraiser Map	Debt/equity routes and fundraiser timing
Bottlenecks & Solutions	Founder pain points and Aveyroni solution stack
Execution Blueprint	Phase-by-phase cadence for running mandates
Parallel Pipeline	How multiple pods run simultaneously

Bottlenecks & solution stack

The founders' problems are predictable: capital, CXOs, buyers, tools, resources, governance and bandwidth.

Founder bottlenecks are the product opportunity

Aveyroni monetizes the bottlenecks that stop good businesses from becoming institutionally investable.

Bottleneck	What founders lack	Aveyroni solution
CXOs	No full-time CFO/COO/RevOps/sector operators	Fractional/interim CXO pod
Capital	Local lenders only; no institutional map	Fundraiser + investor CRM + targeted process
Warm buyers	No access to strategics/PE decision makers	Buyer-first relationship map
Tools	Manual MIS, no data room, no analytics	AI-enabled dashboards and data room
Resources	Cannot hire every expert before capital	On-demand specialist bench
Governance	Family decisions, messy entities	Legal/CFO/company-secretary cleanup
Bandwidth	Daily business prevents transformation	Aveyroni PMO cadence

Stakeholder pitch map

Each stakeholder hears the same engine translated into their own pain point.

Stakeholder	Their pain	Aveyroni pitch
Founders	Not ready for capital/exit; valuation gaps	We make you institutionally investable before you raise or sell
PE	Too many near-fit rejects	Give us your buy-box; we create future investable supply
VCs	Portfolio stuck between rounds	We make companies next-round or exit ready
Family offices	Need proprietary, de-risked deals	We originate and professionalize off-market assets
Investment banks	Too-early mandates waste time	Send early companies; we return mandate-ready deals
Fundraisers	Need fundable stories + data room	We prepare the asset before fundraising starts
CXOs/specialists	Want high-value projects	Join defined value-creation mandates

Fundraiser is a stakeholder, not an afterthought

The fundraiser should enter after the asset is shaped enough to be fundable.

Bad sequence

Founder needs money →
fundraiser starts cold outreach
→ investors reject messy data

Aveyroni sequence

Readiness diagnostic → KPI/data-
room cleanup → capital structure
→ fundraiser activates qualified
capital

Fundraiser needs from us

Input
Teaser / CIM
Financial model
Valuation bridge
Buyer/investor shortlist
Clean data room

Result: fundraiser conversion goes up because the company now matches a capital provider's buy-box.

Doing multiple workstreams in parallel

Aveyroni should not wait for one vertical to prove itself before collecting demand in another.

Workstream	First asset	First 90-day win
Hospitals	Readiness scorecard + target list	1 paid diagnostic / founder mandate
TPA	IRDAI ownership map	2 promoter calls with MDIndia/Health India-type names
Medtech	Manufacturer export scorecard	3 founder calls with strategic buyer map
Powered land	Power-node + land map	5 site mandates / LOIs
Multifamily	Underwriting model + owner list	2 LOIs or buyer memos
Series A/B/C	Next-round readiness diagnostic	2 startup diagnostics through VC referrals

Central spine: one CRM, one data room model, one buy-box schema, one specialist bench.
Vertical pods customize execution.

Repeatable ecosystem partner identification

Every vertical needs a partner graph: source access, diligence, operations, capital and close.

Partner category	Examples	Role in Aveyroni engine
Source access	Doctors, land brokers, VCs, bankers, lenders, CAs	Find off-market supply
Diligence	Title lawyers, QoE, regulatory, technical experts	Prevent bad deals and price risk
Operators	COO/CFO/RevOps/RCM/RM productivity	Fix valuation gaps
Capital	Fundraisers, debt advisors, PE/FO connectors	Create qualified process
Execution	Lawyers, tax, transaction advisors, VDR support	Close cleanly

Moat = not one contact list. Moat = a living partner graph that improves every time a vertical is tested.

Execution blueprint — one cadence across asset classes

The workflow remains consistent even when the sector changes.

Phase	Timing	Output
Demand capture	Week 0–2	Buyer/investor buy-box map
Supply map	Week 1–4	Target universe + source routes
Catalyst screen	Week 2–5	Ranked high-willingness targets
Readiness diagnostic	Week 4–8	Value-gap report + action plan
Value creation sprint	Month 2–12	Improved KPIs + institutional data room
Capital/M&A process	Month 6–18	Term sheet / LOI / financing
Close & repeat	Month 9–24	Case study + reference loop

Commercial model: more than success fees

Avoid becoming a low-margin consulting firm or a pure broker dependent on one close.

Revenue layer	Description	Why it matters
Diagnostic fee	Fixed-fee readiness assessment	Filters serious founders and pays for first work
Value-creation retainer	Monthly/quarterly program fee	Funds operators and PMO before a transaction
Transaction economics	Success fee / advisory economics where appropriate	Monetizes capital/M&A outcome
Value participation	Equity/warrants/SPV/carry where structured	Captures value created, not just introductions
Partner revenue share	Specialist/CXO/fundraiser economics	Scales without permanent headcount

Target: each mandate should have at least two economics layers, ideally diagnostic + transaction or retainer + value participation.

Partner roles: three engines + external bench

The model works only if roles are clean and non-overlapping.

1

Origination & AI Engine
Screens targets, builds maps,
automates research/outreach,
maintains data room.

2

Capital & Fundraising Engine
Investor buy-boxes, family
offices, fundraisers, debt/equity
relationships.

3

Operating / PE Credibility Engine
CXO bench, value-creation plan,
sector operators, execution
oversight.

External bench: fractional CXOs, legal, tax, regulatory, technical diligence, sector specialists, fundraisers and bankers.

90-day launch plan

The goal is not a beautiful thesis. The goal is signed access and real conversations.

Month	What we build	Success metric
Month 1	Data room workbook, buy-box interviews, target maps for 3 verticals	25 buy-boxes + 100 targets + 20 warm routes
Month 2	Founder outreach, diagnostics templates, specialist bench onboarding	15 founder conversations + 5 specialist SOWs
Month 3	Run first diagnostics and capital/buyer intros	2 paid diagnostics + 1 live mandate + 1 investor shortlist

Recommended first three parallel bets: Hospitals, TPA/healthcare infrastructure, Medtech manufacturing. Data center powered land can run as a fourth opportunistic pipeline.

Risks and how we de-risk

The partner meeting should end with clear risk ownership.

Risk	How it shows up	Mitigation
Too many verticals	No focus, lots of research, no mandates	Run 3 core workstreams + 1 opportunistic, weekly gate
Founder distrust	Founders fear sale pressure	Lead with optionality and value creation
No capital conversion	Fundraisers start too early	Fundraiser activates only after readiness pack
Specialist bench quality	Operators underdeliver	SOWs, milestone fees, references, scorecards
Regulatory risk	TPA/healthcare/finserv complexity	Use specialist counsel before outreach
Economics leakage	We create value but do not capture it	Mandate letter with layered economics before work

Partner decision required

The ask: commit to a focused 90-day pilot, not a vague exploration.

Decision 1
Approve 3 core workstreams

Decision 2
Assign one accountable partner per engine

Decision 3
Agree first commercial offer and economics

Within 7 days	Within 30 days	Within 90 days
Finalize pilot workstreams	Build target/buyer maps	2 paid diagnostics / 1 live mandate
Freeze partner roles	Speak to 10 investors/fundraisers	Activate specialist bench
Approve pitch + mandate docs	Run first founder outreach	Review continuation decision

Appendix

Data workbook, examples, and first-wave operating logic.

Appendix — Workbook tabs created

Aveyroni_Opportunity_Data_Room.xlsx is the live companion spreadsheet.

Tab	What it contains
Dashboard	KPI view of the entire operating system
Use Case Matrix	8 vertical examples with catalyst, thesis, demand, supply, execution, capital route
Buyer Demand Clusters	8 buyer/investor groups and the signals to track
Seller Supply Clusters	6 supply pools and what to verify before outreach
Investor Fundraiser Map	Capital type, likely investors, fundraiser role and prep requirements
Bottlenecks & Solutions	Founder pain points and Aveyroni’s solution stack
Execution Blueprint	6-phase execution cadence
Parallel Pipeline	How 6 workstreams can run at once

The core question for partners

**Do we want to be brokers of existing deals,
or builders of investable companies?**

Aveyroni's edge is not one sector. It is the repeatable ability to find demand, identify supply, fix bottlenecks and create transaction-ready companies before the market catches up.

Fastest → slowest cashflow streams

Rank by cash conversion speed, not by ultimate wealth potential.

Rank	Stream	Speed	First cash / economics
1	Paid readiness diagnostic	7-14d	₹1-5L fixed fee
2	Buy-box analytics + target map	10-21d	₹2-8L project fee
3	Outreach setup / CRM / scripts	14-30d	₹1-3L setup + monthly
4	Value-creation retainer	30-45d	₹2-10L/month
5	Specialist / CXO placement margin	30-60d	10-25% margin
6	Debt / structured-credit intro	45-90d	0.5-2% or retainer
7	Equity fundraising success fee	3-6m	1-3% + retainer
8	Sell-side / strategic M&A	4-9m	1-3% + retainer
9	Portfolio-company turnaround	3-12m	Retainer + milestones
10	SPV / co-invest / carry upside	12-36m	Equity/carry/warrants
11	Principal roll-up economics	24-60m	Dividends + exit gains

Partner takeaway: start with diagnostics + buy-box analytics + outreach setup + retainers; treat transaction/equity upside as compounding, not survival cashflow.

Cash now, transaction upside later

Build predictable advisory cashflow while manufacturing proprietary deals.

Week 1-2

Sell diagnostics

Package as a founder/investor readiness teardown. Price: ₹1-5L. Output: scorecard, gaps, 90-day action plan.

Week 2-4

Sell buy-box analytics

Use our collated spreadsheets to deliver sector maps: catalysts, buyer clusters, seller/supply clusters, target queue.

Month 2

Convert to retainer

Turn diagnosis into monthly value-creation cadence: CXO bench, KPI dashboard, data room, warm-intro preparation.

Month 3+

Layer success upside

Run debt/equity/M&A processes only after readiness improves. Add warrants, SPV economics or milestone-linked upside where possible.

Rule 1

Charge for insight before charging for transactions. Free research kills positioning.

Rule 2

Every paid diagnostic must create a next paid product: retainer, fundraising, M&A, CXO deployment.

Rule 3

Keep success fees as upside, not survival cashflow. Survival comes from short-cycle products.

Who pays first — and why

Same Aveyroni engine, different entry products for each stakeholder.

Founders

Diagnostic + value-creation retainer
They lack CXOs, capital access, tools, buyer intros and a data-room-quality story.

PE / Family Offices

Buy-box analytics + future supply map
They need proprietary near-fit opportunities before banker-led auctions.

VCs

Portfolio rescue / next-round readiness
They need Series A/B/C companies made fundable or exit-ready.

Fundraisers / IBs

Research engine + too-early mandate prep
They need more qualified mandates and data-backed narratives.

Strategic buyers

Target mapping + prepared acquisition candidates
They need seller supply that matches exact buy-boxes and is clean enough to close.

CXOs / specialists

Project marketplace / deployment fees
They need access to high-value mandates without permanent employment.

Cashflow strategy: fastest cash comes from selling clarity; largest upside comes from transaction and equity participation. Aveyroni needs both from day zero.
